SUBJECT INDEX

Alkyl radicals in organic glasses 223–35

Bioelectrochemistry
  applications 113
  use of modified electrodes and mediators in 55–155
Biological electron transfer 57–8
Biological membranes 27–9
Biopolymer solutions 263–9

Catalysis by nitroxyl radicals, ion-molecular processes in 48–51
Catalysis of redox processes 35–54
Catalysts in oxidation by chlorine dioxide, nitroxy radicals as 50–1
Chlorine dioxide, nitroxy radicals as catalysts in oxidation by 50–1
Continuous generation of excited species 6–8

Dehydrogenase based enzyme electrodes 131
Diffusion limited rate constants 5
Direct (unmediated) electrochemistry 82–8
Disordered systems
  dynamical averaging of statical disorder 175–81
  phenomenological approach to kinetics 181–6
  reaction kinetics 167–89
  statically disordered systems 168–75
Dispersive kinetics 157–333

Electrically conducting organic salts 105
Electron-transfer kinetics, effect of distance 58–60
Electron-transfer reactions 57
Electron-transport chains 57

Flavin adenine dinucleotide (FAD) 79, 81
Flavin containing enzymes 81–2
Flavin mononucleotide (FMN) 81
Fluorescence quenching data 13–15
Frozen solutions of proteins 235–49

Gels, relaxation of radiation-induced conductivity in 200–2

Heterogeneous systems
  kinetics in 302–11
  mediation in 99–105
Homogeneous mediation 90–4
  kinetics of 62–7
Homogeneous mediators for NAD(P)H oxidation 118–22
Homogeneous solvents 6–8
Hydrogen atoms, trapped 212–20
Hydroxyl radicals, trapped 221–3
Hypochlorous acid, oxidation of oxygen-containing organic substances with 49–50

Immobilised enzyme films 67–73
Intermediates in water radiolysis 190–223
Ion-molecular processes in catalysis by nitroxyl radicals 48–51
Ion-radical chain processes in redox catalysis 43–8

Liposomes 24–7
Liquids, radiation-induced intermediates in 250–7
Low-temperature reaction patterns 190–249
Luminescence quenching data 1–33

Matrix isolated species 235–49
Matrix-site-effects 235, 237
Mediated electron transfer 89–105
Membrane enzyme electrodes 73–9
Micellar solutions 257–63
Micelles 19–22
Microheterogeneous systems
  oxygen diffusion/concentration 1–33
  treatment of data in 8–13

NAD 57
NADH
  electrochemical oxidation of 130
  meldola blue modified electrodes for 132
NADP 57
$NAD(P)^+$, electrochemical reduction 132–4
$NAD(P)^+/NAD(P)H$ 114–15
NAD(P)H
  electrochemical oxidation 115–18
  homogeneous mediators for oxidation 118–22
  modified electrodes for oxidation 122–31
Nicotinamide coenzymes 58
Nicotinamide redox coenzymes, electrochemistry of 114–34
Nitrite ion, oxidation with tetranitromethane in presence of nitroxyls 46–8
Nitroxyl radicals 35–54
  applications in 36
  as catalysts in oxidation by chlorine dioxide 50–1
  disproportionation 37–8
  ion-molecular processes in catalysis by 48–51

ion-radical chain processes in redox catalysis 43–8
oxidation 38–40
reduction 40
stoichiometric redox reactions 37–43
NMP.TCNO electrodes 132

One-electron oxidation and reduction 37–43
Organic glasses, alkyl radicals in 223–35
Oxidation of NAD(P)H, modified electrodes for 122–31
Oxidation of oxygen-containing organic substances with hypochlorous acid 49–50
Oxygen concentration in microheterogeneous systems 1–33
Oxygen diffusion in microheterogeneous systems 1–33

Phosphorescence quenching data 13–15
Photostimulated decay of trapped electrons 203–7
Polymer matrices, relaxation and kinetics in 269–302
Post-irradiation decay of excess electrons 191–7
Proteins 15–19
frozen solutions of 235–49
Pulsed experiments 6
Pyrene and its derivatives 14–15
Pyrrolo-quinoline quinone (PQQ) 79, 82

Quinone containing enzymes 82

Radiation-induced conductivity in gels, relaxation of 200–2
Radiation-induced intermediates in liquids 250–7
Radioluminescence kinetics 207–12
Reactant decay 159
Reactant reactivities, distribution of 186–9
Reaction patterns on variable time scales 249–69
Reactivity distribution, time evolution of 160, 161
Redox catalysis, ion-radical chain processes in 43–8
Redox enzymes 57, 58, 59
electrochemistry of 79–113
modified 111–13
types of 81–2
Redox processes, catalysis of 35–54
Redox proteins 58, 59
Reverse micelles 22–4

Simulated fluorescence decay curves 166
Simulated fluorescence decay for unique lifetimes 164
Singlet quenching 17–18
Spectral relaxation of trapped electrons 198–9

Tetranitromethane, oxidation of nitrite ion 46–8
Tetrathiofulvalenium tetracyanoquinodimethanide (TTF.TCNQ) 105–11
Time evolution of reactivity distribution 160, 161
Trapped electrons
photostimulated decay of 203–7
spectral relaxation of 198–9
Triplet quenching 18–19
Tryptophan groups 13–14

Vesicles 24–7

Water radiolysis, intermediates in 190–223

Printed in Great Britain by BPCC Wheatons Ltd, Exeter
